INDEX TO LECTURE NOTES
(ver 1.2)

active antenna III-74
adaptive antenna III-83
antenna temperature III-70
aperture distributions III-27, IV-14
aperture efficiency III-26
aperture field IV-4
aperture in a ground plane IV-4
array directivity III-21
array edge effect III-29
array factor, AF III-2
arrays III-1
atmospheric attenuation V-50
attenuation constant I-6, I-15
axial ratio II-61
azimuth II-19
balun II-31
bandwidth I-81
basis function II-35
Bayliss III-25
bazooka balun II-33
beam coupling loss III-81
beam solid angle II-13
beamforming networks III-38
beamwidth between first nulls (BWFN) III-19
biconical antenna II-53
binomial distribution III-25
blade antenna II-69
blockage IV-42, IV-51
bootlace lens IV-65
Brewster's angle I-31
broadband antennas II-51
bulge factor V-33
capacitance I-45
cascaded devices III-73
Cassegrain IV-36, IV-53
chamber configurations IV-77
characteristic impedance I-45, I-51
Chebyshev III-24
choke II-32
circular polarization I-20
circulator I-79
classification of antennas II-1
clutter III-65
coaxial cable I-41
collision frequency V-57
conductance I-45
conductivity I-3
conjugate matched antenna III-58
constrained lens IV-65
coordinate systems I-87
co-polarized III-8
cosine feed directivity IV-49
cosine feed efficiency IV-49
cosine-on-a-pedestal III-25
coverage diagram V-13
critical frequency V-57
cross polarization IV-62
cross polarization loss IV-43
crossed dipoles II-60
cross-polarized III-8
cylindrical coordinate system I-87
cylindrical paraboloid IV-46
Debye model I-11
decibel (dB) I-86
detection threshold III-71
diffraction region V-36, V-39
digital beamforming III-86
dipole feed IV-58
direct V-2
direction cosines III-6
directive gain II-10
directivity II-10
discrete Fourier transform (DFT) III-50
dispersive dielectric I-13
doubly curved surface IV-35
duct V-4, V-69
earth radius V-22
edge diffraction III-29
edge taper, edge illumination IV-44
effective aperture III-57
effective area III-57
effective height II-64
effective isotropic radiated power V-17
effective radiated power (ERP) V-17
effective temperature III-69
efficiency II-17
electron charge V-57
electron density V-54, V-57
electron mass V-57
element factor, EF III-2
elevation II-19
elliptical polarization II-61
entire domain II-37
E-plane III-7
E-plane horn IV-18
equivalence principle IV-1

equivalent currents IV-1
equivalent earth radius V-23, V-27
equivalent noise temperature III-69
excitation vector II-39
expansion function II-35
false alarm III-71
far field, far zone II-3, II-4
fast Fourier transform (FFT) III-51
feeding antennas II-29
filament of current II-7
filter I-83
flat earth approximation limit V-36, V-41
flux tube, ray bundle IV-39
focused beam III-24
Fourier series II-41
frequency bands I-89, V-6
frequency spectrum I-90
Fresnel reflection I-28
Fresnel zone V-28
Friis transmission equation III-60
front-to-back ratio II-56
gain II-17
geometric series III-4
geometrical optics I-27, IV-40
Gladstone-Dale constant V-22
GPS antenna III-76
grating lobe III-15
grazing angle V-9
ground plane II-58
ground wave V-2, V-41
group velocity I-72, I-77
half wave dipole II-23
half wave dipole, directivity II-25
half wave dipole, radiated power II-25
HARM IV-71
Hata model V-47
height-gain curve V-15
helix antenna II-74
Hertzian (short) dipole II-6
Hertzian dipole, directivity II-10
Hertzian dipole, gain II-17
Hertzian dipole, HPBW II-11
Hertzian dipole, radiated power II-8
Hertzian dipole, radiation pattern II-11
Hertzian dipole, radiation resistance II-17
hog-horn antenna IV-56
horizon, distance to V-24
horizontal polarization V-18
horn antenna IV-18
H-plane III-7
H-plane horn IV-18
Huygen's principle III-9
illumination efficiency III-26
image II-57
impedance I-8, I-45, I-37
impedance matching I-55
impedance matrix II-39
incident fields IV-2
inductance I-45
integral equation (IE) II-35
interference region V-36, V-37
ionosphere V-1
ionospheric hop V-3, V-53
knife edge diffraction V-31
launch angle V-66
layers V-54
lens antenna IV-63
linear array III-3
linear phase progression III-24
link equation III-60
log periodic antenna II-55
lognormal distribution V-47
loop antenna II-71
loss I-64
lossy medium I-14
Love's equivalence principle IV-3
low sidelobe III-23
lumped elements I-61
Luneberg lens IV-66
magic tee I-78
magnetic current II-5
magnetic vector potential II-3
magnetosphere V-56
main lobe, main beam III-4
Martyn's law V-62
matched load I-48,I-54
maximum usable frequency (MUF) V-62
Maxwell's equations I-3
measurement IV-75
method of images II-57
method of moments (MM) II-34
microstrip I-41
microstrip antenna IV-27
miss III-71
modes I-70
modulation I-82
monopole II-59
monostatic radar I-2, III-62
multipath V-2
multipath, flat earth V-8
multiple beam antennas III-78
multiplexer I-84
mutual impedance II-44, II-47
noise III-65

noise bandwidth	III-67
noise figure	III-72
noise power	III-68
nonstandard refraction	V-69
null-field hypothesis	IV-51
nulls	III-4
numerical distance	V-42
numerical integration	II-26
offset reflector	IV-37, IV-55
ohmic loss	II-17
open circuit	I-48,I-54
open-ended waveguide	IV-10
optimum horn	IV-24
optimum usable frequency (OUF)	V-62
orthogonal beams	III-81
parabolic reflector	IV-40
parallel feed	III-38
parasitic	II-56
passive antenna	III-74
patch antenna	IV-27
path loss	V-47
path-gain factor (PGF)	V-10
pattern multiplication	III-2
pattern propagation factor (PPF)	V-10
perfect electric conductor (PEC)	II-2
perfect magnetic conductor (PMC)	IV-5
permeability	I-3
permittivity	I-3
phase constant	I-6, I-15, I-73, I-77
phase delay	III-11
phase shifter	III-48
phase velocity	I-73,I-77
phasor	I-4
piecewise sinusoid	II-36
planar array	III-33
plane waves	I-6
Plank's blackbody law	III-67
plasma frequency	V-57
polarization diversity (reuse)	III-8
polarization loss factor, PLF	II-64, II-68
power density	I-10
power divider	I-63
Poynting theorem	I-10
principal planes	III-7
propagation	V-1
propagation constant	I-6,I-15,I-44
propagation mechanisms	V-1
pyramidal horn	IV-19
quadratic phase error	IV-20
quarter wave transformer	I-56
radar cross section	III-64
radar range equation (RRE)	III-62
radiation integral	II-2
radiation intensity	II-10
radio (radar) horizon	V-24
radome	IV-68
rain attenuation	V-50
random roundoff	III-46
Rascal	IV-53
ray tracing	IV-39
Rayleigh-Jeans approximation	III-68
receiving antennas	III-57
reciprocity	II-42
reciprocity theorem	II-44
rectangular aperture	IV-6
reflected	V-2
reflecting systems	IV-36
reflection coefficient	I-30, I-47
reflection loss	II-30
reflector antenna	IV-34
refraction	V-22
refractive modulus	V-71
refractivity	V-70
resistance	I-45
rotating linear polarization	II-62
rough surface	V-18
roundoff error	III-46
scanned aperture	IV-16
scanned array	III-13
scattered fields	IV-2
secant law	V-62
self impedance	II-40
series feed	III-37
shadow boundary	V-31
short circuit	I-48,I-54
sidelobe control	III-23
sidelobes	III-4
signal-to-noise ratio (SNR)	III-71
sinc function, sin(x)/x	IV-9
singly curved surface	IV-35
skin depth	I-17, I-39
skip distance	V-59
smart antenna	III-84
smooth surface	V-18
space feed	III-38
sphere diffraction	V-32
spherical coordinate system	I-87
spherical wave	I-23
spillover	IV-42
spiral antenna	II-53
standard atmospheric conditions	V-27
standing wave	I-48
steradian	II-9
Stratton-Chu (radiation) integral	II-2

stub tuning I-58
subdomain II-36
super refraction V-70
surface current I-16
surface duct V-69
surface resistivity I-17
surface wave V-21
switch I-80
system noise temperature III-69
taper III-24
Taylor III-25
TE10 mode IV-10
TEM wave I-8, I-24
terrain diffraction V-4
thermal noise III-67
thin wire antennas, patterns II-28
thin wires, current distribution II-22
thin-wire approximation II-6
time delay III-11, III-48
total internal reflection I-31
transfer impedance II-44
transformations I-87
transmission line I-41
transmission line circuit I-47
transmission line equation I-42
transverse electric (TE) I-68, I-71
transverse magnetic (TM) I-68, I-69
troposcatter V-3
troposphere V-1
turnstile antenna II-60
ultra-low sidelobe III-23
uniqueness theorem II-58
urban propagation V-46
vertical polarization V-18
virtual height V-58
visible region III-5
voltage minimum/maximum I-50
VSWR II-30
wave equation I-4
wave equation, vector II-3
wave impedance I-72, I-77
waveguide radiation IV-10
waveguides I-66
wavelength in waveguide I-73, I-77
white noise III-67
yagi-uda II-56
